UNDERGRADE FYP PRESENTATION INSTRUCTIONS

General Presentation Guidelines

- Your presentation must consist of **10–12 slides**.
- Each group will have **strictly 10 minutes** for the presentation.
- We have limited time and multiple projects to evaluate, so please strictly adhere to the allocated time.
- It is strongly recommended that you practice your presentation beforehand to ensure that you can comfortably complete it within 10 minutes.
- Please also bring a copy of your **weekly attendance sheet / FYP progress page**.
- Your presentation must reflect the discussions, activities, and topics mentioned in your weekly attendance / progress sheet. There should be consistency between your documented progress and what you present.

Required Presentation Contents

1. Project Introduction (1 Slide)

- Project title.
- Group members.
- Supervisor's name.
- Brief project overview.
- Project domain.

2. Background & Motivation (1 Slide)

- What is the project about?
- Why did you choose this project?
- What is its real-world relevance?
- Who will benefit from it?

3. Problem Statement (1 Slide)

- The actual problem you intend to solve.
- Why does this problem exist?
- Who is affected by this problem?
- Why are existing solutions insufficient?

Important: The problem statement must be specific and clearly defined, not just a general description of a field.

4. Aim, Objectives & Scope (1 Slide)

- One main project aim.
- 3–5 specific objectives.
- Functional requirements (what the system will do).
- Non-functional requirements (how well the system should perform, e.g., security, usability, and reliability).
- Project limitations and boundaries.
- What is NOT included in the project.

5. Literature Review / Existing Systems (1–2 Slides)

- Comparison of existing systems or solutions.
- Limitations of existing solutions.
- Identification of the research or development gap.
- Explanation of how your proposed project differs from existing solutions.

6. Proposed Methodology & Software Engineering Diagrams (2–3 Slides)

- Proposed solution.
- How the system will work.
- Proposed software development methodology (Agile, Waterfall, etc.).
- Initial workflow or flowchart.
- Expected system architecture.
- Relevant software engineering diagrams.

7. Technologies & Tools (1 Slide)

Identify your proposed technology stack, including:

- Frontend: React, HTML/CSS, Flutter, etc.
- Backend: Python, Java, Node.js, etc.
- Database: MySQL, MongoDB, etc.
- AI/ML (if applicable).
- Proposed algorithms/models (if applicable).

- Development tools: GitHub, Figma, VS Code, etc.

You should also briefly justify why you selected these technologies.

8. Initial Progress / Preliminary Work (1 Slide)

Demonstrate what you have actually accomplished so far:

- Requirements gathering.
- Initial system design.
- Use-case diagram.
- ERD or database design (if applicable).
- UI wireframes or prototype.
- Initial coding or proof of concept, if available.
- Meetings and feedback received from your supervisor.

Clearly distinguish between completed work and planned work.

9. Project Timeline & Future Plan (1 Slide)

- Work completed during the first semester.
- Remaining tasks for the first semester.
- Expected deliverables for the second semester.
- Gantt chart or project schedule.
- Potential risks and challenges.

Final Instructions

Please take these guidelines seriously and prepare your presentations accordingly. Your presentation should demonstrate your understanding of the project, the research you have conducted, the progress achieved so far, and your plan for completing the project.

Make sure that your presentation is consistent with your weekly FYP attendance / progress record.

Best of luck, everyone!
